

I have had the [Bassett SM14-1A] scope mount for about 15 yrs, got it from a friend for Christmas one year. Have it on a match grade M1A that I used to use for Service Rifle competition.

The reason my friend gave me the mount was so I could take it on/off, retaining the scopes zero and the rifle stayed service rifle competition legal. The indexing ribs on the mount are the key, I believe. Works well and doesn't need the "other" mounting point the others use. Great product. Was looking for something to put on my son's rifle, thought you guys were long gone. The same friend did a search and lo and behold, there you were. What a relief. Now I can get one I know is good.

I have taken a good many deer with your mount on my rifle and last year my son (15) took his first hog with one shot at 225 yards. All we did to get ready was put it on the rifle, fired a couple of test rounds, and it was right on the money! My son was tickled pink with his first hog.

Thanks for a great product!
